- Auto-lp Protocol
- Tokenomics
- Roadmap

Introduction:

Doge Inu or Dogeinu, it's Symbol or Ticker, is a community driven Meme token on Binance chain that is targeting the entertainment industry. This BEP20 Token was made by the people for the people, particularly with new investors in mind. Doge Inu has safety protocols that ease the downward pressure from sell offs and leave long term investors feeling at ease. Find Doge Inu on Pancakeswap or buy it on our website from any blockchain.

Doge Inu embarks on a cryptocurrency-fuelled mission unlike anything else the space has ever experienced. Powered by an almost guaranteed underlying virality factor, alongside an immensely experienced team and world-famous designers, Doge Inu will construct itself as a quintessential monument that the cryptocurrency space deserves.

What from within the current cryptocurrency space will stand the test of time? Most NFT collections are graveyards of ETH. The Metaverse will play a huge role in everyone's lives, but not in the immediate future. While all other vapour-ware, short lived fads, and blatant money-grabs fade into eventual oblivion, Doge Inu is constructing something that will truly last, both physically, and in the minds of the masses.

Marketing Strategy:

Being by far one of the most unique projects in the cryptocurrency space, the Doge Inu team will settle at nothing less than engaging the entire world. Our goal is to have investors from every country. This means activation events across the USA (and eventually the world), alongside a whole host of other marketing avenues that will be explored. Partnerships with reputable marketers and other projects will also play a key role in spreading the word of Doge Inu across the globe and cryptocurrency realms.

The \$dogeinu project's social media approach will be a spectacle to behold.

Team:

The Doge Inu Team is filled with highly competent individuals with a strong ambition to succeed. We have a never say never attitude and enjoy communicating with our community in the telegram. Feel free to come say hi and ask any questions you may have. We will be doing AMA Events (ask me anything) through our telegram.

Safety Protocols

\$DogeInu has three big Safety Protocols that safe net holders and help stabilize value. Cryptocurrency can be quite volatile during Bullruns from massive sell offs, to full on scams. Many people have lost what could have been millions, their life savings, their rent, even their next meal. You can never count on the storm to be gentle, but you can count on Doge Inu and Friends to help you thru it and on your way to financial freedom.

Value Stabilizing Protocol:

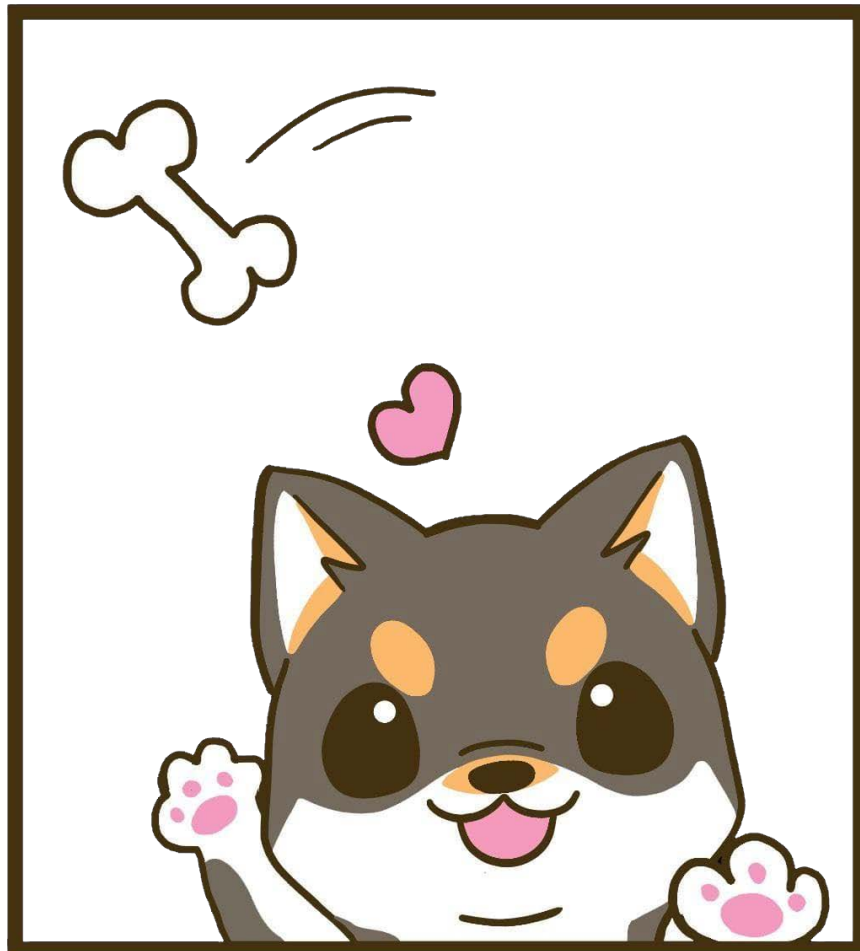

Our First Protocol is our Value stabilizing protocol. With every sell transaction one percent of the transaction is burned keeping the value but shrinking supply this helps other holders especially in the case of panic sell offs, whales dumping, or Bullrun market volatility. The Mechanism softens downward pressure with constant upwards pressure.

Anti-Whaling Protocol

Our Third Protocol is our antiwhaling protocol. We have a max sell transaction amount of 136 billion, and max wallet amount of ten trillion. So, whales are encouraged to space out selling and can only hold a certain amount. In essences whales will burn more tokens and energy when selling a lot of tokens at once. This helps late investor feel at ease and more comfortable late in the project.

Auto-LP Protocol:

Our Last Protocol is our Auto LP Protocol. With every sell transaction two percent of the transaction is relocated to the liquidity pool. This allows there to be a constant flow of liquidity bringing Doge Inu and the community to life. The spirit of Doge Inu is in all of us, guiding us up the mountain of Financial Freedom.

TOKENOMICS:

Name: Doge Inu

Symbol: \$DOGEINU

Total Supply: 1 Quadrillion (1,000,000,000,000,000)

Max Sell limit: 136 Billion (136,000,000,000)
